EVENT SUMMARY

The 8TH LNG TRANSPORT HANDLING AND STORAGE INDONESIA 2018 FORUM was successfully held over 3 days. Sponsored by GTT and Mirah Resources, 137 from 16 countries participated throughout the duration of the workshop, main conference and site tour. Organized by Energy Nusantara and All Events Group, the intimate setting provided delegates multiple opportunities to closely network and strengthen business relationships with key LNG and power generation decision makers in Indonesia and around the region. Prior to the main forum, 24 participants attended the combined strategic and technical one-day masterclass entitled PT Pelindo Energi Logistik hosted around 37 delegates to

The ongoing commitment to deliver electricity to every corner of Indonesia's populous archipelago has again made LNG and natural gas the push factor coming from the dynamic power generation and industrial sectors. The development of mini LNG terminals to facilitate the distribution of LNG to gas-fired power plants located in remote areas continues to be one of the growth areas. LNG import infrastructures – both onshore and offshore – together with small scale LNG facilities and downstream distribution channels such as small LNG ships, bunkering and LNG trucking will continue to play a key role in the growing LNG industry. Small-scale LNG – or Mini LNG in some cases – infrastructures will ease the distribution of LNG across islands and enable direct penetration into undeveloped markets and locations.

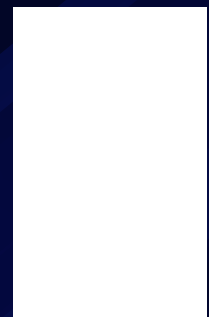

EVENT SUMMARY

L-R: Key VIPs and Senior level speakers from Directorate General Oil and Gas, SKK Migas and PT Pertamina

With LNG and natural gas set to be at the forefront for the power sector in Indonesia, many stakeholders are beefing up their presence and influence in the highly potential market. LNG to Power integration projects below 200MW and Floating LNG Power Plant and Barges are among the key areas that will be highlighted during this forum. The projection to be a net LNG importer by 2022 – a inevitably move to support both power generation and industries – has mobilized state owned enterprises and the private sector to either tender out, procure or build LNG infrastructures and small FSRUs in West Papua and Eastern Indonesia region.

EVENT SUMMARY

L-R: Stakeholders from BPH Migas, PT PLN, PT PGN LNG, GTT, PT Humpuss Intermoda Transportasi, PT PJB, PT Nusantara Regas & PT MedcoEnergi

Pelindo Energi Logistik's floating regasification unit (FRU) and floating storage unit (FSU) operating in Bali has paved the way for a real and realistic era of small-scale floating LNG regasification options for stakeholders – especially in other parts of Indonesia. This facility will cement continued interest for stakeholders wanting to distribute LNG in smaller parcels, as marine fuel and for other small-scale uses.

EVENT SUMMARY

L-R: Participants attending the site tour at the Bena LNG Terminal

Key senior stakeholders that presented and attended this important event include the Directorate General of Oil & Gas, SKK Migas, BPH Migas, PT Pertamina, PT PLN, PT PGN, PT Nusantara Regas, PT PGN LNG, PT Pertagas Niaga, PT Indonesia Power, PT PJB, PT BKI, Oil And Gas Regulatory Authority - Government Of Pakistan (OGRA).

WHAT CAN YOU EXPECT IN 2019?

Following up the success of 2018, the 9th Annual LNG Transport, Handling and Storage Indonesia Forum, 10-13th September 2019, Padma Resort, Bali, Indonesia will continue to be the melting pot. With that in mind, this annual forum continues to be a one-shot platform for all serious stakeholders to highlight their positions in and distinctive solutions for Indonesia's LNG industry while establishing and maintaining relationships with key policy-makers and private sector players integral to gas LNG supply, transportation and distribution.

The forum remains the annual meeting point for industry stakeholders to connect, network, explore business opportunities - and ultimately - enable the development of a productive and sustainable Indonesia LNG sector.

In addition, this is also the opportunity for delegates to come up close and personal and visit the first Mini LNG Terminal owned by Pelindo Energi Logistik.

2019 AGENDA

10th Sep 2019
Networking Golf

10th Sep 2019
Masterclass
Workshop

11th - 12th Sep 2019
Conference Day 1
Conference Day 2

13th Sep 2019
Site Tour

Focused themes to be highlighted include:

- Small LNG offshore infrastructure
- LNG to Power Projects below 200MW
- Digital Integration and Transformation for LNG terminals and Ports
- LNG Bunkering and Distribution
